# Introduction in Agile Methodologies

part 2

#### Course structure

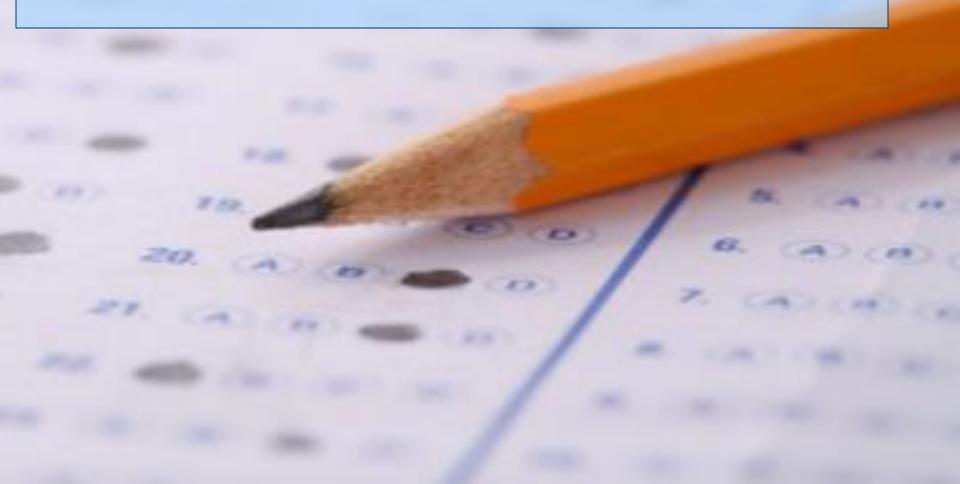

- Agile Methodologies Overview
- Scrum
- Extreme Programming
- Kanban
- Crystal
- The Agile Unified Process

#### Presentation – optional, +2 points

When? - seminar (last 4 weeks)

What? - own experience

How? - Powerpoint presentation

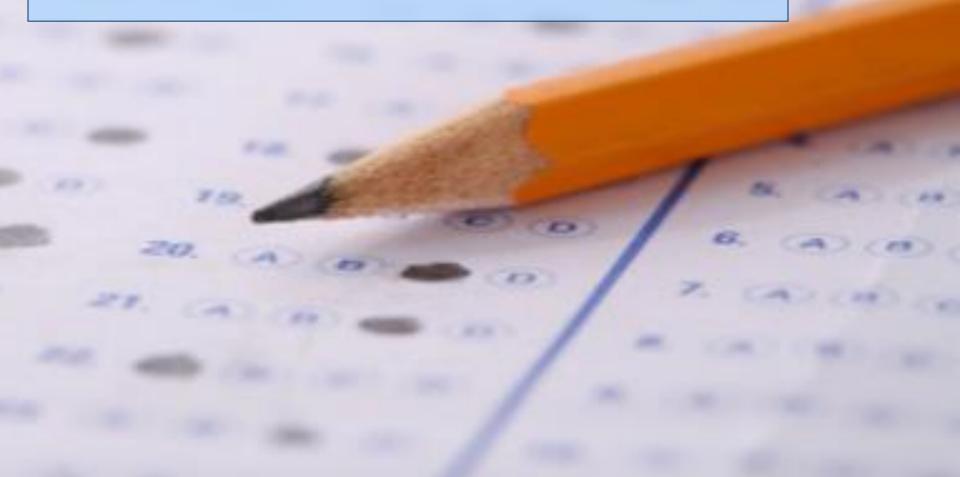

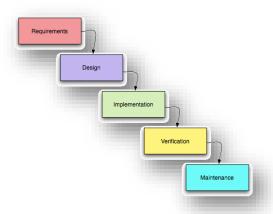

# Test

When? - session

What? - multiple choice test

How? - written

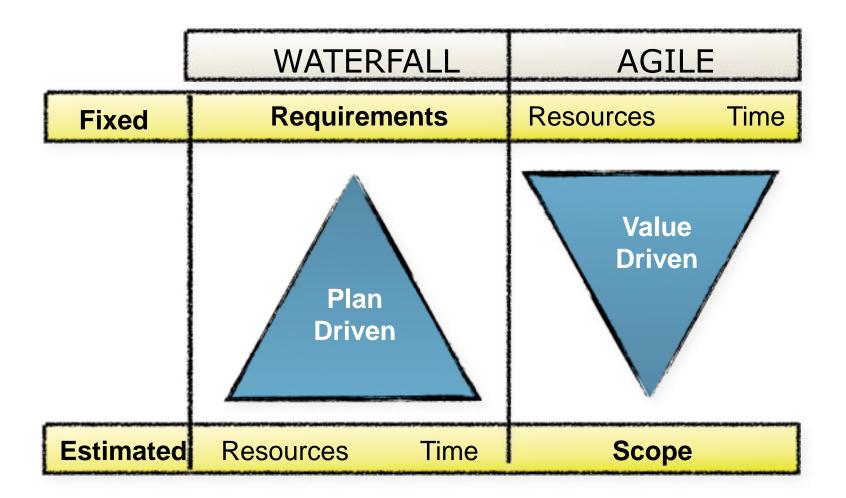

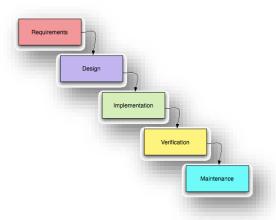

# Overall picture

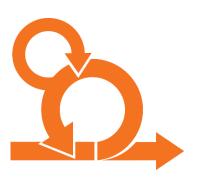

# Change

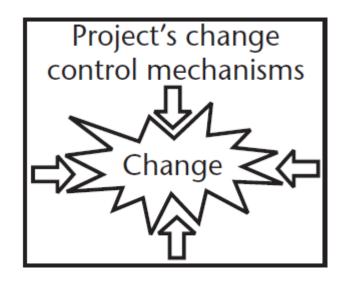

■ Incomplete specifications

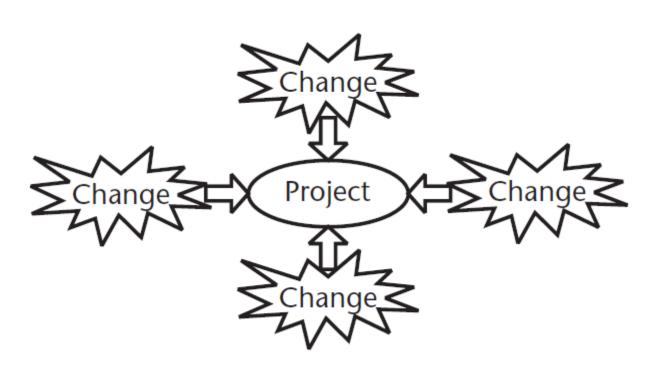

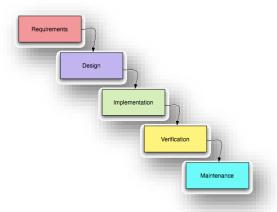

Significant estimation errors

# Controlling Change

# Reacting to Change

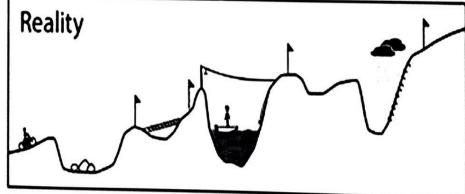

# **Planning**

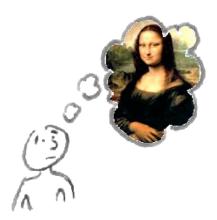

#### Plan-driven

#### **Evolutionary**

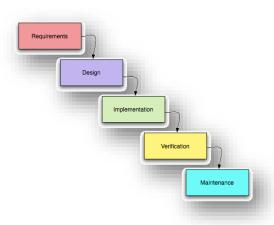

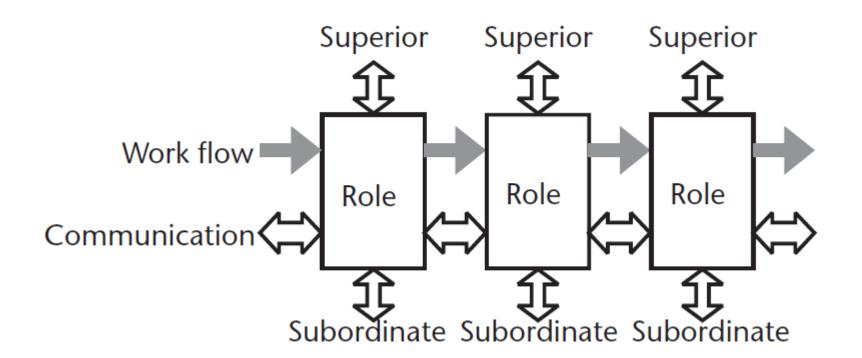

## Communication

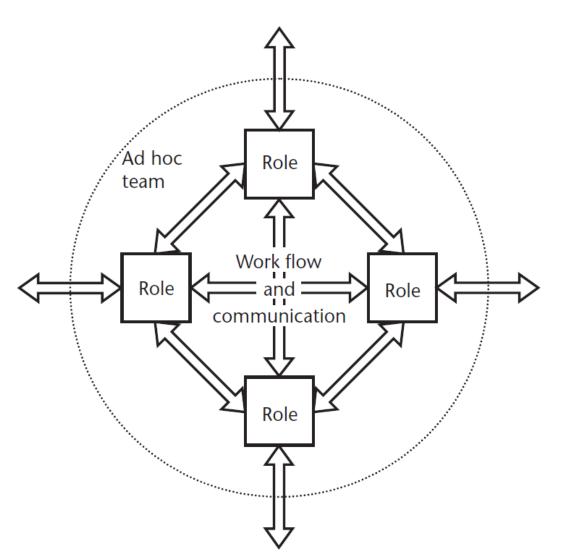

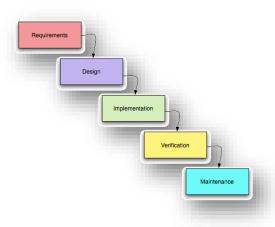

# Hierarchical Organization

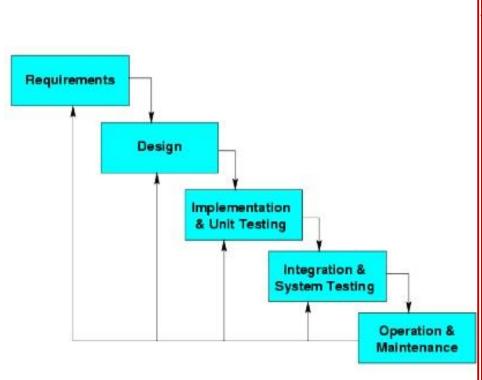

# Cooperative Organization

## Learning

ge11 facilitated by @courosa

NOW YOU SEE IT!
by @CathyNDavidson

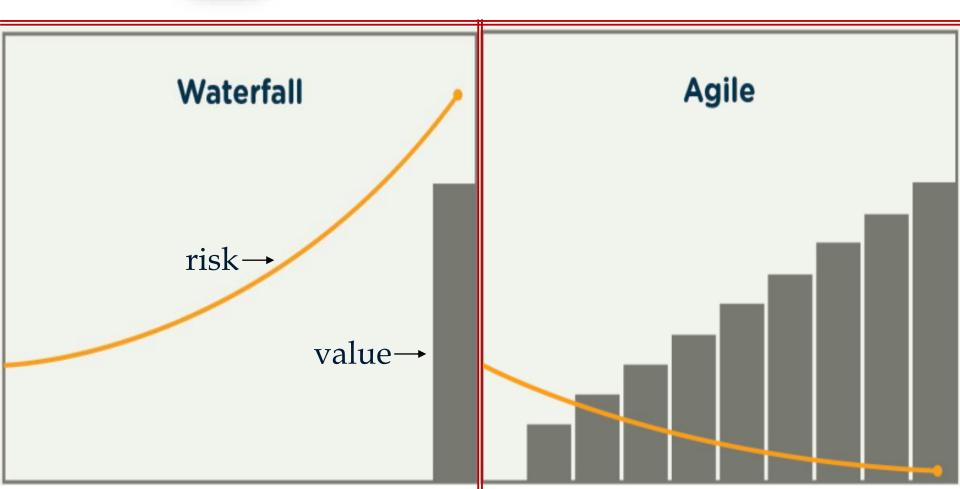

The Backwards Brain Bicycle

#### Value vs Risk

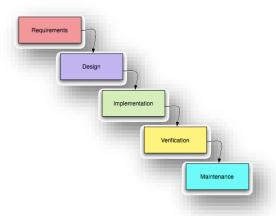

Software is cheapest in lots of SMALL cartons

Milk is cheapest in BIG cartons

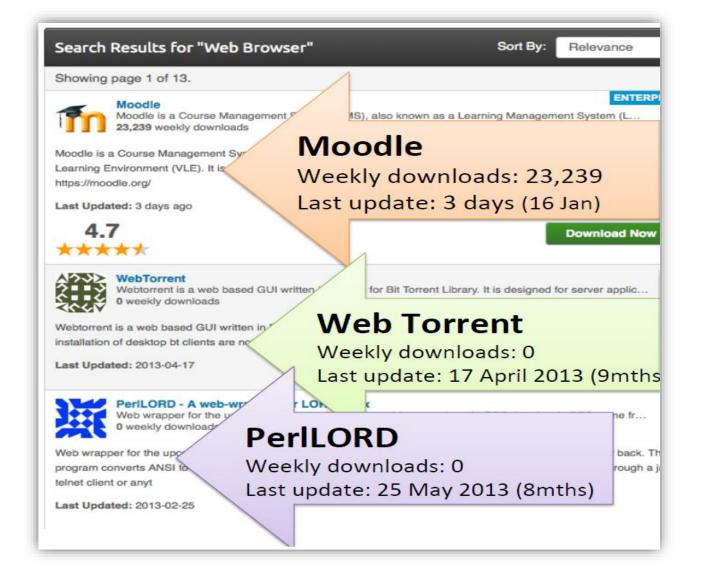

#### **Definition**

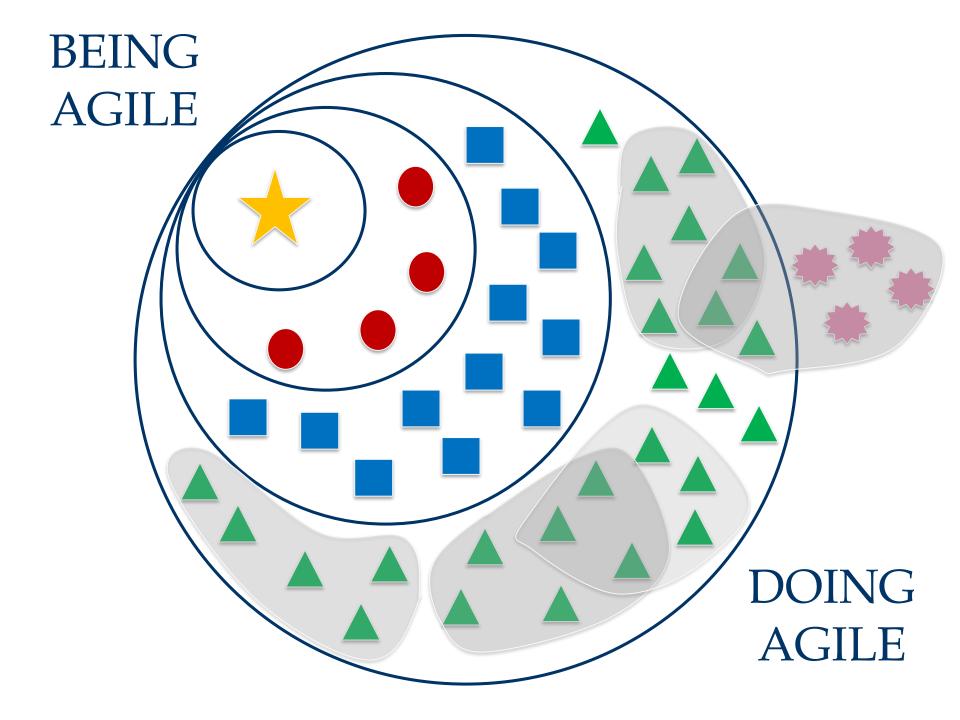

1.If they use it, it will change2.Only dead software stops changing

Systems thinking

Lean

Agile

Kanban

Scrum

Extreme Programming AUP

Crystal

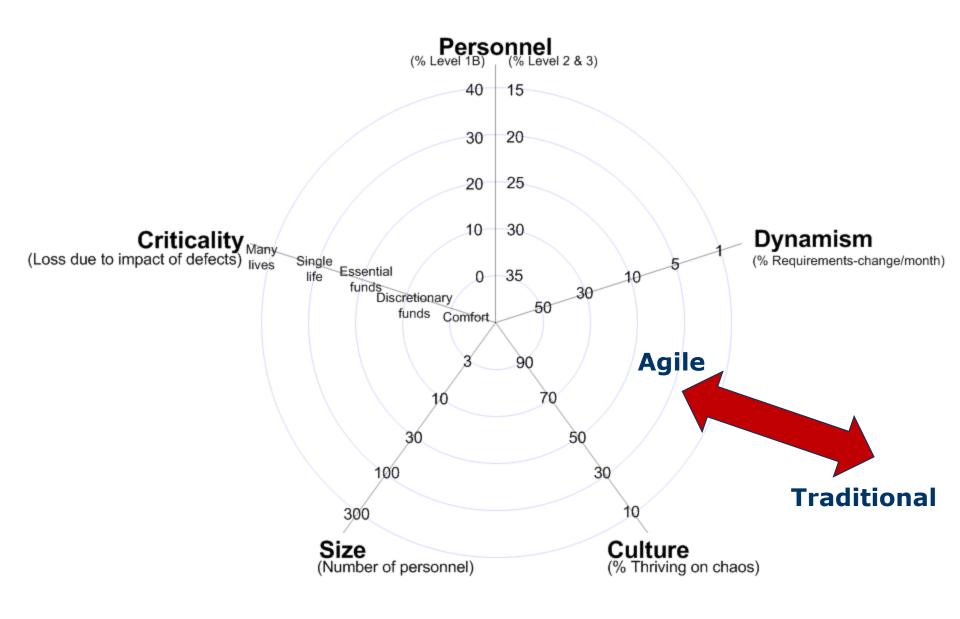

DSDM

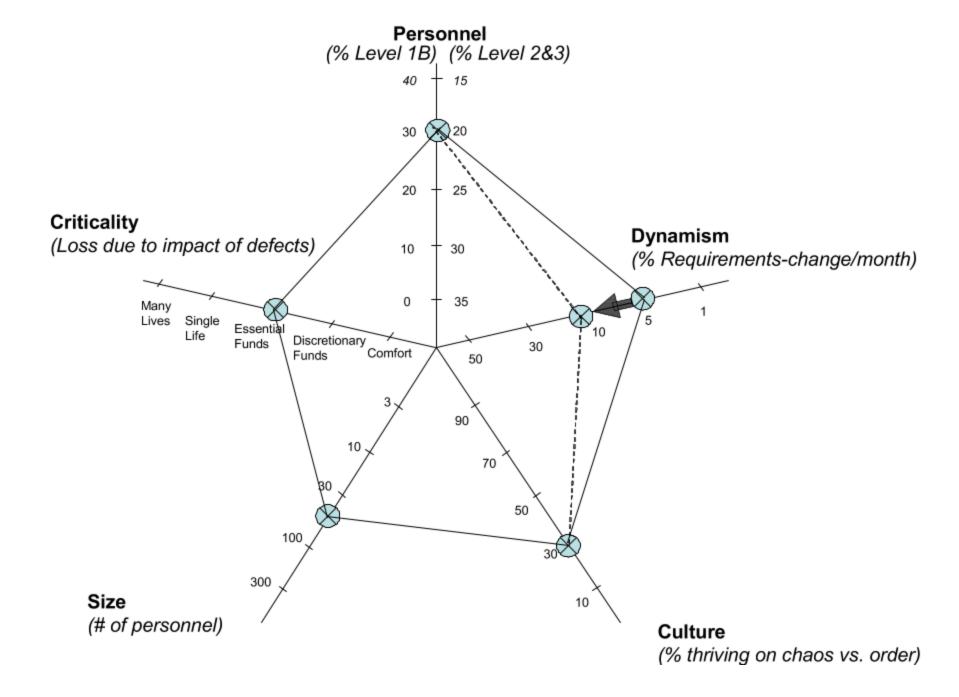

# Levels of Software Method Understanding and Use

Level	Characteristics	
3	Able to revise a method (break its rules) to fit an unprecedented new situation	
2	Able to tailor a method to fit a precedented new situation	
1A	With training, able to perform discretionary method steps (e.g., sizing stories to fit increments, composing patterns, compound refactoring, complex COTS integration). With experience can become Level 2.	
1B	With training, able to perform procedural method steps (e.g. coding a simple method, simple refactoring, following coding standards and CM procedures, running tests). With experience can master some Level 1A skills.	
-1	May have technical skills, but unable or unwilling to collaborate or follow shared methods.	

Factor	Agility Considerations	Discipline Considerations
Size	Well-matched to small products and teams. Reliance on tacit knowledge limits scalability.	Methods evolved to handle large products and teams. Hard to tailor down to small projects.
Criticality	Untested on safety-critical products. Potential difficultiies with simple design and lack of documentation.	Methods evolved to handle highly critical products.  Hard to tailor down to low-criticality products.
Dynamism	Simple design and continuous refactoring are excellent for highly dynamic environments, but a source of potentially expensive rework for highly stable environments.	Detailed plans and Big Design Up Front excellent for highly stable environment, but a source of expensive rework for highly dynamic environments.
Personnel	Requires continuous presence of a critical mass of scarce Cockburn Level 2 or 3 experts. Risky to use non-agile Level 1B people.	Needs a critical mass of scarce Cockburn Level 2 and 3 experts during project definition, but can work with fewer later in the project—unless the environment is highly dynamic. Can usually accommodate some Level 1B people.
Culture	Thrives in a culture where people feel comfortable and empowered by having many degrees of freedom.	Thrives in a culture where people feel comfortable and empowered by having their roles defined by clear policies and procedures.

"We can never direct a living system, only disturb it and wait to see the response...

Christopher Avery

We can't know all the forces shaping an organization we wish to change, so all we can do is provoke the system in some way be experimenting with a force we think might have some impact, then watch to see what happens."
